PROFILE

Full-stack software engineer and developer consultant with experience building scalable business applications and modernizing legacy systems in regulated environments. I work across back-end integrations, APIs, databases, and front-end development, with a strong interest in robust system design, maintainable code, and production-ready solutions.

SKILLS

Programming Languages: Java, TypeScript, JavaScript, Python, C, C++.

Back-End: Spring Boot, REST APIs, Node, SOAP, Kafka, MQ, PostgreSQL, MySQL, FastAPI.

Front-End: React, React Native, NextJs, HTML, CSS, Bootstrap, Tailwind.

Tools & Platforms: Codex, Claude, Docker, Grafana, Git, Azure, AI-assisted code analysis.

Core Competencies: Full-stack development, backend architecture, API integration, legacy modernization, requirements analysis, system orchestration, financial systems, stakeholder collaboration.

EXPERIENCE

Fullstack Developer

September 2025 - Present

Netcompany, Copenhagen

Consultant within financial services

- Work on the modernization of a securities trading system, focusing on the corporate actions domain and the transition from a segregated account setup to an omnibus-style architecture.
- Analyze legacy system behavior and create technical and functional requirements for a new Java/Spring-based backend system using SQL, Kafka, Docker, and Grafana.
- Own analysis and solution design for the corporate actions system, including how it integrates with the existing legacy platform, internal services, REST APIs, SOAP services, and MQ-based communication.
- Define integration strategies and orchestration flows between multiple internal systems to manage connectivity, response handling, error scenarios, and future migration away from the legacy system.
- Address technical complexity related to backwards compatibility, regulatory requirements, strict uptime expectations, legacy data models, unclear documentation, and security constraints.
- Built an AI-driven custom analysis tool to identify and analyze dependencies between internal services in the EGL system being replaced, improving the team's ability to understand legacy code and system relationships.
- Collaborate with customers, business experts, architects, and developers through workshops, requirements walkthroughs, document reviews, daily meetings, and solution discussions.

Fullstack Software Engineer

June 2023 - Present

TellusTalk AB, Remote

- Develop and maintain a business communications application, working across both front-end and back-end functionality.
- Build and improve user-facing features using modern web technologies, while ensuring responsive interfaces and a smooth user experience.
- Contribute to back-end development, database-driven functionality, application logic, and integration work supporting scalable communication workflows.
- Collaborate closely with a small development team to deliver maintainable solutions, troubleshoot technical issues, and improve application performance and reliability.

IT Manager

November 2022 - March 2023

ProBits, Umeå

- Designed and developed a new company website and supported planning for its future implementation.
- Provided technical assistance to customers using the application, ensuring a smooth and efficient user experience.
- Implemented updates and modifications to the mobile application to improve functionality, user experience, and alignment with changing business requirements.

Teaching Assistant

January 2023 - June 2023

Umeå University, Umeå

- Reviewed and graded exams and projects, providing constructive feedback to support student learning and academic development.

Customer Service Representative

March 2018 - September 2020

Vattenfall, Umeå

- Assisted customers with billing, electricity contracts, relocation, and general information.
- Troubleshoot internal system issues and handled errors related to daily system usage.

EDUCATION

Bachelor's Degree in Computer Science

2021 - 2025

Umeå University

LANGUAGES

- English
- Swedish
